Adds Dozens of New Graphics Commands to BASIC

penguin softwareTM

the graphics people

Cat Graphics adds 55 new graphics, sound, and miscellaneous commands to BASIC, making your programming life much simpler. Commands include Circle, Box, Fill, Curve, Line, Magnify, Noise, Reflect, Penguin, and many more. Everything has been designed to be as easy to use as possible. No more PEEKS, POKES, or CALLS, and no need to calculate memory addresses. **Cat Graphics** makes it a snap to design multi-colored shapes, scroll the screen in four directions, and print text in different sizes and colors.

On the Apple, the same commands can be used for standard hi-res on Apple II's, or for double-res on expanded IIe's and on Apple IIc's. This means programs can be written that will work in either graphics mode! Apple's new double-res mode gives you twice the resolution, and over twice as many colors.

Also included on the **Cat Graphics** disk are font, shape, and sound editors with built-in "help screens", and an exotic, quixotic, amazing, and amusing program called Electric Fire. Watch it!

Penguin Software is the maker of an entire series of graphics software, with something for everybody. **Magic Paintbrush** is a drawing program that turns your TV or monitor into a colorful canvas, and is a subset of **The Complete Graphics System**, which is a much more comprehensive package for more detailed graphics design, including text and 3-D. **Transitions** is a computer slide show and presentation system. **Paper Graphics** lets you print your screen graphics to your printer. **The Graphics Magician** is for programmers who want to put compact graphics and animation into their own programs, and **The Graphics Magician Picture Painter** is for compact graphics in Apple double-res and on the Commodore 64. **Additional Type Sets** contains extra type sets for use with **The Complete Graphics System**, and **Map Pack** contains a set of graphics screens containing pre-drawn maps. And **The Data Analyzer** lets you do statistical analysis, charts, and graphs of your data.
