Transitions is the ultimate slide show and presentation system. With it, you can create a professional-looking presentation from your Apple hi-res pictures, or you can simply organize your picture disks for convenient and easy viewing.

Transitions lets you sequence the pictures on your disks in the order in which you'd like to present them, then choose from 44 different transitions between them. ("Transitions" are wipes that clear the screen or bring on a new picture. Examples are horizontal, vertical, and diagonal scrolls, radar wipes, "windshield" wipes, geometric patterns, and so on.)

Your presentation can consist of 1 to 8 picture disks. The disks can hold standard 8K image pictures (holding 12-15 per disk), or packed pictures (holding approximately twice as much, sometimes more). Included is a simple program that will convert your standard hi-res disks to packed hi-res disks.

Sequencing the pictures for a standard hi-res disk involves shuffling miniature versions of the pictures so that they are in the right order for your presentation. Sequencing packed pictures is done in a card-file fashion, removing and inserting the pictures so that they are sequenced the way you want. The presentation editor lets you choose and test transitions for each "slide" presented, and includes automatic, manual, and step and test modes for editing and testing your show.

The run-time presentation program lets you show your presentation automatically, with timed delays, or manually, using keys or paddle/joystick buttons for moving forward or backward through your slides. A "jump" feature lets you quickly jump to any point in the show.

Also included is a fast-running, plain old "vanilla" presentation that lets you show your picture disk without any pre-editing, and a "one key/one picture" utility that lets you quickly display any picture on a picture disk, complete with a pointer that you can control to highlight features of a picture. And a hi-res catalog feature lets you visually see the catalogs of your picture disks as miniature versions of the pictures on the disk.
